**Dear Siri Language Engineering Hiring Team,**

I am writing to express my interest in the Siri Language Engineer (Vietnamese) position at Apple. As a native Vietnamese speaker and Applied AI Engineer with production experience building LLM-powered systems, RAG architectures, and multi-agent workflows, I am eager to contribute to advancing Siri's capabilities for the Vietnamese market.

At Silver Tiger Technology, I design and deploy end-to-end generative AI solutions for enterprise clients, including RAG-based knowledge retrieval across 100+ multilingual sources, LLM-based phishing detection with explainable AI, and self-hosted foundation model inference at scale. This has given me hands-on experience across the full model lifecycle: data generation, training, evaluation, and deployment.

Previously at VinBigdata, I worked on Vietnamese speech processing, building data pipelines, improving Grapheme-to-Phoneme models, and enhancing ASR/TTS systems. At ThinkPrompt, I led a team of 3+ engineers, architected MLOps pipelines, and built scalable ML infrastructure, strengthening my software engineering foundation alongside ML expertise.

My background spans Python, software engineering fundamentals, and contemporary ML techniques including large language models and agentic AI systems. I would welcome the chance to discuss how my experience can contribute to your team.

Sincerely,

**Nguyen Quoc Khanh**
